

## Plan Service Ahead to Minimize Downtime

Planned service maintenance helps to minimize downtime and emergency visits, which aid in reducing costs. A few considerations from our 24/7 field technicians: Is your UPS ready for storm season? How is your aeration looking? Looking for a new sampler? Call us to schedule service today before the busy season arrives. Read more at [energenecs.com/plan](http://energenecs.com/plan)

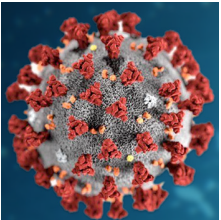

## Angry Birds! – a Tale from the Tower

In 2001, the city of Wauwatosa was installing security switches on the top hatches of their water towers. Bill O'Neal, an Energenecs field service technician, was installing limit switches on all the hatches and running cable. Water towers are usually about 160 feet high, and the one where this particular incident happened had an outside ladder. He was climbing up the ladder on the outside leg and was just below the ball at about 90 feet when suddenly he felt like he just got punched in the back. It turned out to be a couple of red tailed hawks which hit him with both feet out! Read Bill's tale from the tower at [energenecs.com/birds](http://energenecs.com/birds)

## Our Service Team is Here for You

We have been closely monitoring the complex and rapidly evolving COVID-19 situation and would like to extend a special thank you to the local, state and federal agencies, as well as health officials who work diligently to contain the virus. We are following the guidance from the Centers for Disease Control (CDC) to ensure that we are making consistent, fact-based decisions about our activities and our operations. Our staff is working hard at trying to maintain as normal of operation as possible to aid in supporting you. Read more from the CDC about water & wastewater at [energenecs.com/covid19](http://energenecs.com/covid19)

## Every Day is Earth Day

April 22nd, 2020 marked 50 years of celebrating Earth Day. Energenecs is committed to this movement by offering renewable energy solutions plus lowering their use of energy with solar panels. The panels have produced approximately 100MWh annually, comparable to the powering 91 homes in the Midwest. As of April 2020, Energenecs' solar panels have saved 278,281 lbs of CO2 emission, the equivalent of planting 7009 trees! Read about our renewable energy solution partners at [energenecs.com/earth](http://energenecs.com/earth)

## Meet Doralee Piering

Office Coordinator

Doralee Piering is the office coordinator at Energenecs and is responsible for making the office run smoothly. She has been at Energenecs since 2003, over 17 years.

Piering was hired as a part time sales assistant, then took over a role that provided seminars, trade shows and marketing skills. Part time went to full time. Then Jared (President of Energenecs) offered her the office coordinator position in 2006.

This position ranges from procuring plans and specifications from engineering firms, to working on million dollar proposals with the sales team, to the coordination of trade show logistics. She also has been involved with editing and layout of the Clarifier journal for Wisconsin Wastewater Operators for many years.

Doralee remarks about her job:

It's a very friendly work environment here. It's enjoyable to work with sales team members who keep me on my toes, especially working on serious bids and proposals, everyone focuses on what needs to be done. Our sales staff is very good about chipping in and helping out because it's a real technical effort to prepare some of the larger proposals.

For fun, Doralee really likes the cold weather and used to go winter camping in a tent. She says it's very pretty and calming to sit by the campfire with the snow gently falling. She also enjoys hiking in Wisconsin's glacial hills and the mountains in Arizona... just being outside in general, camping, boating, and kayaking.
