

## Ensure proper equipment for your site: Start with a pilot unit.

Are you ready for the construction season? Energenecs provides the option of renting wastewater equipment in collaboration with our manufacturers. Through studies using pilot units, you can present evidence for the feasibility of your proposed solution. Pilots offer a way to gain practical experience, test reliability and timing,

capture useful data, postpone capital expenditures and allow uninterrupted service while equipment is removed or replaced. Energenecs can provide units from Charter, Water Surplus, Lone Star and Huber. Learn more at [energenecs.com/pilots](https://energenecs.com/pilots)

## Say Farewell to “Forever” Chemicals Quickly with a PFAS Removal Rental Unit.

If PFAS is detected in your water, you have two immediate options: shut down the well or temporarily rent a PFAS removal system. WaterSurplus offers rental systems, ensuring water safety and providing a temporary solution while a comprehensive PFAS removal project is planned and executed. These relatively small,

pre-engineered systems come skidded or mounted inside a trailer for easy installation at your existing facility, usually within two to three months. Read more at [energenecs.com/rentals](https://energenecs.com/rentals)

## Hyke wins Huber’s Rookie of the Year!

Debbie Hyke, tech sales at Energenecs, was honored with the “Rookie of the Year” award at HUBER’s Annual Meeting. Reflecting on her achievement, Debbie remarks, “I was genuinely surprised and incredibly grateful to receive this award. Being able to represent a world-class manufacturer like HUBER is a source of immense

pride for us. This award validates the dedication and expertise I bring to our projects. I’m excited about the opportunities that lie ahead in serving Energenecs and the outstanding manufacturers we proudly represent.” Read more at [energenecs.com/rookie](https://energenecs.com/rookie)

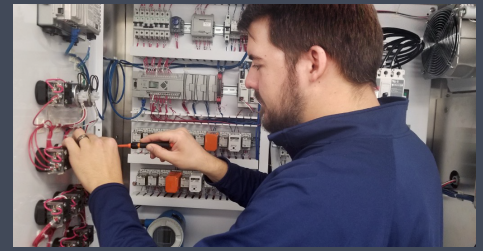

## Chili-arious Halloween Lunch

Energenecs’ spooky office Halloween bash was a “chili-arious” affair! For lunch, they had a “chili dump” where everyone brought their own brew of spooky stews, and it was a ghoulishly good time! There was also a fang-tastic costume contest... See the photos that left everyone howling with delight at [energenecs.com/halloween](https://energenecs.com/halloween)

## Meet Brent Erlauer SCADA Technician

Brent recently joined the Energenecs team as a SCADA Technician. He was previously living in Colorado, working for a company called Munro, programming the pump stations.

Brent went to UW Lacrosse and received his physics degree, then he transferred to UW Milwaukee for his mechanical engineering degree. He has pivoted to becoming more of an electrical engineer, giving him a pretty wide breadth of knowledge and skills.

Brent remarks “I like it when you take a heap of separate parts, put them together in a very specific way, add some electrical magic, and it comes to life and works exactly how you want it to. It’s very satisfying. I also enjoy the fact that the work we do, helping provide clean water and treating wastewater, is essential for modern society to function. It’s nice working for a company that has a net positive effect on society.”

He also enjoys hiking, camping and hunting with his wife. They bought their first house when they moved back, to Wisconsin, so, fixing it up has taken up most of their free time!
